- Git

Projects

Job Portal
- Developed a MERN (MongoDB, Express, React, Node.js) full-stack job portal.
- Implemented secure user authentication and registration for user management.
- Enabled job browsing, filtering (keywords, location, category), and application/
- Provided users with personalised dashboards and profile views.
- Developed a comprehensive admin dashboard for managing users, jobs, and categories.
- Admins can create/delete jobs and categories, manage users, and edit job listings.
- Prioritised a seamless and user-friendly experience.

Cape Town Hiking Website
- Developed a website on Cape Town's hiking trails using HTML and CSS.
- Implemented features allowing users to save trails for later reference.
- Enabled users to leave comments and express liking for each trail.
- Focused on creating an informative and engaging experience for trail enthusiasts.

To-do App with Authentication
- Developed a full-stack MERN (MongoDB, Express, React, Node.js) to-do application.
- Implemented features allowing users to add, edit, and delete tasks.
- Integrated JWT tokens for secure user authentication.
- Developed middleware for user registration, sign-in, and task protection.
- Focused on delivering a seamless and secure experience for managing tasks.

Weather App
- Developed an application using React, a weather API, and styled with Tailwind CSS.
- Implemented features providing hourly and daily forecasts for multiple locations.
- Enabled users to search for any city or obtain the weather for their current location.
- Focused on delivering a user-friendly experience for accessing accurate weather information.
